Maribeth Wojenski Mawbith Wosensii

Transportation Assistant Planning Director

Bureau of Policy and Planning

SUBJECT:

Connecticut Ozone/PM2.5 Air Quality Conformity Determination

2019-2045 Metropolitan Transportation Plans and 2018-2021 Transportation Improvement Programs

Attached is an electronic version of the latest Regional Transportation Conformity Report. As established in the Department's Air Quality LEAN that was held last year, this version combines both the Ozone and PM2.5 Air Quality Conformity Determinations of the 2019-2045 Metropolitan Transportation Plans and the FY 2018-2021 Transportation Improvement Programs for the following areas:

- 1. Connecticut portion of the New York-Northern New Jersey-Long Island, NY-NJ-CT Ozone Moderate Nonattainment Area.
- 2. Greater Connecticut Ozone Marginal Nonattainment Area.
- 3. Connecticut portion of the New York-Northern New Jersey-Long Island, NY-NJ-CT PM 2.5 Attainment/Maintenance Area.

The February 2019 report shows conformity to the motor vehicle emission budgets for both Ozone nonattainment areas as noted in the current State Implementation Plan (SIP) for air quality, as well as the PM 2.5 attainment/maintenance area. Emissions were calculated using the latest version of the Environmental Protection Agency (EPA) required software, MOVES2014b.

An electronic version of the report will be posted on the CTDOT website at http://www.ct.gov/dot/cwp/view.asp?a=3529&q=447490.

Each MPO shall follow their public involvement procedures to notify the public that a new Ozone and/or PM2.5 Air Quality Conformity Analysis has been prepared. Please make the document available for a 30-day public review and comment period, as well as appropriate public meeting.

Please direct any questions or comments regarding the Air Quality Emission Analysis to Ms. Judy Raymond, Transportation Supervising Planner, at judy.raymond@ct.gov or (860) 594-2032. After the public review and comment period, please provide Ms. Raymond with a resolution stating your region's endorsement of the conformity determination(s). A sample resolution for each nonattainment and attainment area has been included for your information.

1. Executive Summary

This report documents the air quality conformity analysis of the 2018-2021 Transportation Improvement Programs (TIPs) and 2019-2045 Metropolitan Transportation Plans (MTPs) as carried out under the regulations contained in the United States Environmental Protection Agency's (EPA) final rule, published in the November 24, 1993 Federal Register, with subsequent amendments and additional federal guidance published by EPA, the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA). The process involved consultation with affected agencies such as EPA, FHWA, FTA, the Connecticut Department of Energy and Environmental Protection (CTDEEP) and the Metropolitan Planning Organizations (MPOs) within the State of Connecticut. The air quality emissions analysis is a responsibility of the Connecticut Department of Transportation (CTDOT), acting as the MPO for this task.

"Conformity" is a requirement of the Federal Clean Air Act Amendments (CAAA) Section 176(c) (42 U.S.C.7506(c)) and EPA conformity regulations (40 CFR 93 Subpart A). These regulations require that each new MTP and TIP be demonstrated to conform to the State Implementation Plan (SIP) before the MTP and TIPs are approved by the MPO or accepted by the United States Department of Transportation (USDOT). This ensures that the MTP and TIPs are consistent with air quality goals and that progress is being made towards achieving and maintaining Federal air quality standards. A conformity determination is undertaken to estimate emissions that will result from an area's transportation system. The analysis must demonstrate that those emissions are within limits outlined in state air quality implementation plans.

Under the transportation conformity regulation, the principal criteria for a determination of conformity for transportation plans and programs are:

- The TIP and MTP must pass an emissions budget test using a motor vehicle emissions budget (MVEB) that has been found to be adequate by EPA for transportation conformity purposes, or an interim emission test;
- The latest planning assumptions and emission models specified for use in conformity determinations must be employed;
- The TIP and MTP must provide for the timely implementation of transportation control measures (TCMs) specified in the applicable air quality implementation plans; and
- Interagency and public consultation.

As the federal air quality districts for ozone and PM2.5 include several counties and various planning regions, the emission analysis must be coordinated to include the TIPs and MTPs of several regions.

The CTDOT performs this coordination role. Each region submits its draft TIP and MTP to the CTDOT and the CTDOT in turn combines the TIPs and MTPs for all appropriate regions and conducts the analysis on each pollutant's impact for each air quality district in relation to the established MVEBs.

For the 2019-2045 MTP, summer day emission estimates for ozone precursors, volatile organic compounds (VOC) and nitrogen oxides (NOx), and annual emission estimates for particulate matter 2.5 microns or smaller (PM2.5) and NOx as a precursor were developed for years 2018, 2025, 2035, and 2045 forecast years. These emission estimates were calculated using EPA's Motor Vehicle Emission Simulator (MOVES2014b).

The results of this analysis, in Tables 1 and 2 below show that the 2019-2045 MTP and the 2018-2021 TIP mobile emissions are within the MVEBs for all forecast years per pollutant. This analysis provides a basis for a determination of conformity for the 2019-2045 MTP and the FY 2018-2021 TIP.

Table 1: Ozone Conformity - NOx and VOC Emissions Budget Test Results

| | | Tons per day | | | | | | |
|------|-----------------------------|--------------|-------|---------|------|------------|--------|--|
| Year | Ozone Area | Serie | s 31G | Budgets | | Difference | | |
| | | VOC | NOx | VOC | NOx | VOC | NOx | |
| 2018 | CT Portion of NY-NJ-CT Area | 16.61 | 23.74 | 17.6 | 24.6 | - 0.99 | - 0.86 | |
| 2016 | Greater CT Area | 14.96 | 21.18 | 15.9 | 22.2 | - 0.94 | - 1.02 | |
| 2025 | CT Portion of NY-NJ-CT Area | 12.39 | 13.94 | 17.6 | 24.6 | - 5.21 | -10.66 | |
| 2025 | Greater CT Area | 11.18 | 12.53 | 15.9 | 22.2 | - 4.72 | - 9.67 | |
| 2035 | CT Portion of NY-NJ-CT Area | 7.27 | 8.45 | 17.6 | 24.6 | -10.33 | -16.15 | |
| 2035 | Greater CT Area | 6.49 | 7.53 | 15.9 | 22.2 | - 9.41 | -14.67 | |
| 2045 | CT Portion of NY-NJ-CT Area | 6.41 | 7.85 | 17.6 | 24.6 | -11.19 | -16.75 | |
| 2045 | Greater CT Area | 5.76 | 7.01 | 15.9 | 22.2 | -10.14 | -15.19 | |

Table 2: PM2.5 Conformity - Direct PM2.5 and NOx Emission Budget Test Results

| | | Tons per year | | | | | | | |
|------|-----------------------------|-------------------|---------|-------------------|----------|-------------------|----------|--|--|
| Year | PM2.5 Area | Series 31G | | Budgets | | Difference | | | |
| Teal | FIVIZ.3 AI Ca | Direct | NOx | Direct | NOx | Direct | NOx | | |

| 2025 | CT Portion of NY-NJ-CT Area | 221.6 | 4,707.9 | 516.0 | 9,728.1 | -294.4 | -5,020.2 | | |
| 2035 | CT Portion of NY-NJ-CT Area | 169.2 | 2,987.4 | 516.0 | 9,728.1 | -346.8 | -6,740.7 | | |
| 2045 | CT Portion of NY-NJ-CT Area | 152.4 | 2,803.5 | 516.0 | 9,728.1 | -363.6 | -6,924.6 | | |

2. What is Transportation Conformity?

Transportation conformity is a planning process required by the CAA Section 176(c), which establishes the framework for improving air quality to protect public health and the environment. The goal of transportation conformity is to ensure that FHWA and FTA funding and approvals are given to highway and public transportation activities that are consistent with air quality goals.

The CAA requires that metropolitan transportation plans, TIPs, and Federal projects conform to the purpose of the SIP. Conformity to a SIP means that such activities will not cause or contribute to any new violations of the National Ambient Air Quality Standards (NAAQS); increase the frequency or severity of NAAQS violations; or delay timely attainment of the NAAQS or any required interim milestone. Conformity requirements apply in areas that either do not meet or previously have not met air quality standards for ozone, carbon monoxide, particulate matter, or nitrogen dioxide. These areas are known as "nonattainment areas" or "maintenance areas", respectively.

Connecticut contains nonattainment areas for ozone (O3) and maintenance areas for carbon monoxide (CO) and PM2.5.

For MTP and TIP conformity, the determination shows that the total emissions from on-road travel on an area's transportation system are consistent with the MVEBs and goals for air quality found in the state's SIP. A conformity determination demonstrates that implementation of the MTP or TIP will not cause any new violations of the air quality standard, increase the frequency or severity of violations of the standard, or delay timely attainment of the standard or any interim milestone.

This document was developed by the CTDOT to demonstrate that the MTP and TIP, as updated, are in compliance with the MVEBs for the nonattainment and maintenance areas that fall within the state's planning boundary. In accordance with EPA regulation 40 CFR 93 Subpart A, this conformity determination is being issued in response to the adoption of new MTPs.

In addition, the conformity determination demonstrates compliance with the congestion management process in transportation management areas (23 CFR §450.322), development and content of the MTP (23 CFR §450.324), and fiscal constraints for MTPs and TIPs (40 CFR §93.108-119).

3. Nonattainment and Maintenance Areas in Connecticut

a. Ozone Nonattainment Areas

Ozone is an extremely reactive, colorless gas comprised of three atoms of oxygen. Ozone exists naturally in a layer of the earth's upper atmosphere known as the stratosphere, where it shields the earth from the sun's harmful ultraviolet rays. However, ozone found close to the earth's surface, called ground-level ozone, is a component of smog and a harmful pollutant. Ground-level ozone is produced by a complex chemical reaction between VOCs and NOx in the presence of sunlight.

Mobile source NOx emissions form when nitrogen and oxygen atoms chemically react inside the high pressure and temperature conditions in an engine. VOC emissions are a product of partial fuel combustion, fuel evaporation and refueling losses caused by spillage and vapor leakage.

Exposure to ozone has been linked to a number of respiratory health effects, including significant decreases in lung function, inflammation of airways, and increased symptoms such as cough and pain when breathing deeply. High concentrations of ozone can also contribute to reductions in agricultural crop production and forest yields, as well as increased susceptibility of plants to disease, pests and other environmental stresses

such as harsh weather. This pollutant alone contributes to the majority of unhealthy air quality days in Connecticut, as measured by the Air Quality Index (AQI).

EPA revised the ozone NAAQS in 2008. On May 21, 2012, EPA published rules in the Federal Register (77 FR 30160) that established the approach for classifying nonattainment areas, set attainment deadlines, and revoked the 1997 ozone standard for transportation conformity purposes. Areas designated nonattainment for the 2008 ozone NAAQS were classified into one of the following categories based on the severity of their ozone problem: Marginal, Moderate, Serious, Severe, or Extreme. EPA also established attainment dates for each area classification.

In May 2016, EPA determined that 11 Marginal areas did not attain the 2008 ozone standards by the July 20, 2015 attainment date, that these areas do not qualify for a 1-year attainment date extension and that they must be reclassified as Moderate based on their 2012-2014 air quality data. Both the Greater Connecticut and the Connecticut portion of the New York-Northern New Jersey-Long Island (NY-NJ-CT) nonattainment areas were two of the eleven areas.¹ The "bump- up" designation to Moderate was effective on June 3, 2016.

In this action, the EPA also established a due date of January 1, 2017, by which states with newly-reclassified Moderate areas must submit SIP revisions to address Moderate nonattainment area requirements for those areas. The reclassified areas must attain the 2008 ozone standards by the July 20, 2017 moderate attainment deadline.

On March 20, 2017, EPA notified CTDEEP that EPA had determined the 2017 MVEBs for the Greater Connecticut ozone nonattainment area, submitted as a SIP revision by CTDEEP to EPA on January 17, 2017, to be adequate for transportation conformity purposes. On May 31, 2017, EPA published its adequacy finding in the Federal Register (82 FR 24859) and the MVEBs became effective on June 15, 2017 for transportation conformity purposes.

On June 4, 2018, EPA published a final rule that designated new nonattainment areas for the 2015 Ozone NAAQS (83 FR 25776). These designations were effective on August 3, 2018. Therefore, conformity of transportation plans and TIPs for the 2015 Ozone NAAQS must be demonstrated by August 3, 2019. This analysis demonstrates conformity to the new 2015 Ozone NAAQS for both Connecticut non-attainment areas.

On October 1, 2018, EPA published a final rule approving certain SIP revisions relating to the 2008 8 hour NAAQS (83 FR 49297), including approval of the MVEB as shown in Table 3.

Table 3: Approved Motor Vehicle Emissions Budgets - Ozone

| Year | Area | VOC | NOx | |
|------|---|-------------------|-------------------|--|
| Tear | Area | (tons/summer day) | (tons/summer day) | |
| 2017 | Connecticut portion of the New York- Northern New Jersey-Long Island, NY-NJ-CT Ozone Area | 17.6 | 24.6 | |
| 2017 | Greater Connecticut Ozone Area | 15.9 | 22.2 | |

¹ Source: Table 4 in 77 FR 30160, subsequently revised based on a decision by the DC Circuit Court of Appeals (NRDC vs EPA; No. 12-1321; Decision date 12/23/2014).

b. PM2.5 Maintenance Area

Fine particulate matter, also called PM2.5, is a mixture of microscopic solids and liquid droplets suspended in air, where the size of the particles is equal to or less than 2.5 micrometers (about one-thirtieth the diameter of a human hair). Fine particles can be emitted directly (such as smoke from a fire, or as a component of automobile exhaust) or be formed indirectly in the air from power plant, industrial and mobile source emissions of gases such as sulfur dioxide and nitrogen oxides.

The health effects associated with exposure to fine particles are serious. Scientific studies have shown significant associations between elevated fine particle levels and premature death. Effects associated with fine particle exposure include aggravation of respiratory and cardiovascular disease (as indicated by increased hospital admissions, emergency room visits, absences from school or work, and restricted activity days), lung disease, decreased lung function, asthma attacks, and certain cardiovascular problems such as heart attacks and cardiac arrhythmia. While fine particles are unhealthy for anyone to breathe, people with heart or lung disease, asthmatics, older adults, and children are especially at risk.

In December of 2004, EPA signed the final rulemaking notice to designate attainment and nonattainment areas with respect to the PM2.5 NAAQS, becoming effective April 5, 2005. In Connecticut, Fairfield and New Haven Counties were included in the New York-Northern New Jersey-Long Island, NY-NJ-CT PM2.5 nonattainment area. On June 20, 2007, PM2.5 budgets were found to be adequate for the early progress SIP. CTDEEP submitted a re-designation request and maintenance plan for the Connecticut portion of the NY-NJ-CT area on June 22, 2012. The plan demonstrated that Connecticut's air quality met both the 1997 annual and the 2006 24-hour PM2.5 NAAQS due to a combination of national, regional and local control measures implemented to reduce emissions and presented a maintenance plan that ensures continued attainment through the year 2025. The end of the maintenance period was established as 2025, consistent with the CAA section 175A(a) requirement that the plan provide for maintenance of the NAAQS for at least 10 years after EPA formally approves the re-designation request.

EPA subsequently determined that the 2017 and 2025 MVEBs in the maintenance plan were adequate for transportation conformity purposes and effective as of February 20, 2013. On September 24, 2013, EPA published its approval of the PM2.5 re-designation request, establishing October 24, 2013 as the effective date of re-designation to attainment/maintenance for Connecticut's portion of the NY-NJ-CT area for both the 1997 annual and 24-hours PM2.5 NAAQS. Table 4 summarizes Connecticut's current PM2.5 MVEBs.

Table 4: Approved Motor Vehicle Emissions Budgets – PM2.5

| Year | Area | Direct PM _{2.5} (tons/year) | NOx (tons/year) |
|------|---|---|--------------------|
| 2017 | Connecticut portion of the New York- Northern New Jersey-Long Island, NY-NJ-CT PM _{2.5} Area | 575.8 | 12,791.8 |
| 2025 | Connecticut portion of the New York- Northern New Jersey-Long Island, NY-NJ-CT PM _{2.5} Area | 516.0 | 9,728.1 |

c. Carbon Monoxide Maintenance Areas

Carbon monoxide is produced by the incomplete burning of carbon in fuels, including gasoline. High concentrations of CO occur along roadsides in heavy traffic, particularly at major intersections and in enclosed areas such as garages and poorly ventilated tunnels. Peak concentrations occur during the colder months of the year when CO vehicular emissions are greater and meteorological inversion conditions occur more frequently, trapping pollutants near the ground.

There were formerly three CO nonattainment areas in the state. These were the Southwestern portion of the state, the New Haven-Meriden-Waterbury area, and the Hartford-New Britain-Middletown area. The remainder of the state was in attainment for CO. Attainment was demonstrated in each of the nonattainment areas and, subsequently, they were designated as full maintenance areas. On September 13, 2004, EPA approved a CTDEEP submittal for a SIP revision for re-designation of these areas to limited maintenance plan status, thus eliminating the need for budget testing. Effective January 2, 2016, the Hartford-New Britain-Middletown area was in full attainment status. The New Haven-Meriden-Waterbury area completed the maintenance period effective December 4, 2018 while the Southwestern Connecticut area will be effective May 10, 2020. In the future, "hot-spot" carbon monoxide analyses will be performed to satisfy "project level" conformity determinations.

d. PM10 Attainment Area – Limited Maintenance

EPA previously designated the City of New Haven as nonattainment with respect to the NAAQS for particulate matter with a nominal diameter of ten microns or less (PM10). The PM10 nonattainment status in New Haven was a local problem stemming from activities of several businesses located in the Stiles Street section of the city. Numerous violations in the late 1980's and early 1990's of Section 22a-174-18 (Fugitive Dust) of CTDEEP regulations in that section of the city led to a nonattainment designation (CTDEEP, 1994: Narrative Connecticut Department of Energy and Environmental Protection, State Implementation Plan Revision, For PM10, March 1994). Corrective actions were subsequently identified in the SIP and implemented, with no violations of the PM10 NAAQS since the mid-1990s.

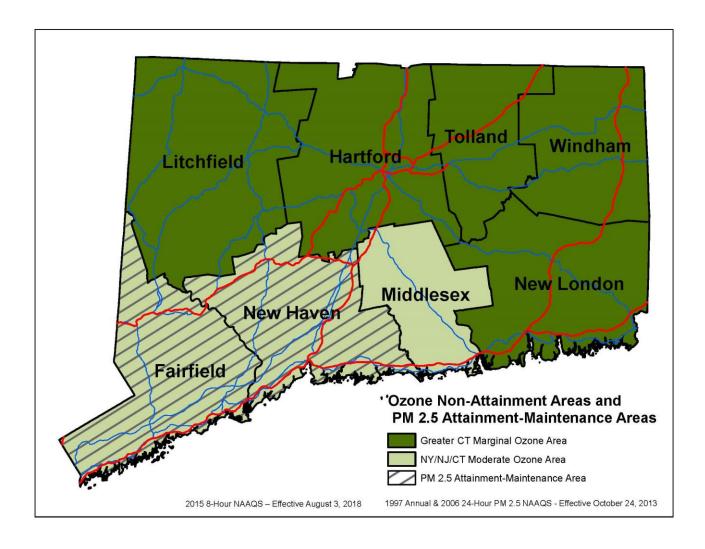

On October 13, 2005, EPA published in the Federal Register (70 FR 59690), approval of a request by CTDEEP for a limited maintenance plan and re-designation of the New Haven nonattainment area to attainment for the PM10 NAAQS. This direct final rule became effective on December 12, 2005.

All construction activities undertaken in the City of New Haven are required to be performed in compliance with Section 22a-174-18 (Control of Particulate "Emissions") of the CTDEEP regulations. All reasonable available control measures must be implemented during construction to mitigate particulate matter emissions, including wind-blown fugitive dust, mud and dirt carry out, and re-entrained fugitive emission from mobile equipment.

As with limited maintenance plans for other pollutants, emissions budgets are considered to satisfy transportation conformity's "budget test". However, future "project level" conformity determination may require "hot spot" PM10 analyses for new transportation projects with significant diesel traffic in accordance with EPA's Final Rule for "PM2.5 and PM10 Hot-Spot Analyses in Project-level Transportation Conformity Rule PM2.5 and PM10 Amendments; Final Rule (75 FR 4260, March 24, 2010) which became effective on April 23, 2010.

Figure 1: Connecticut Ozone Nonattainment Areas and PM2.5 Attainment/Maintenance Area

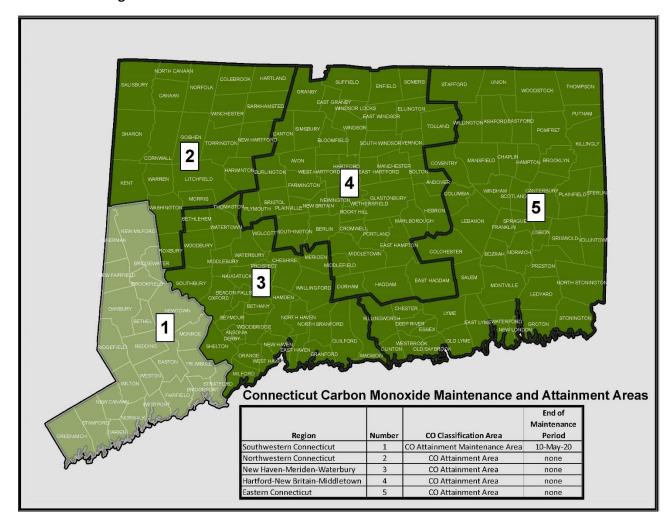

Figure 2: Connecticut Carbon Monoxide Maintenance and Attainment Areas

4. How Does Connecticut Demonstrate Conformity?

a. Transportation Planning Work Program

CTDOT's FY 2019-2020 Transportation Planning Work Program contains a description of all planning efforts, including those related to air quality, to be sponsored or undertaken with federal assistance during FY 2019 and 2020. Included with this program are several tasks directly related to CTDOT's responsibilities under Connecticut's air quality SIP. Additional functions, such as those supporting the preparation of project level conformity analysis, are funded under project related tasks. This work program is available at CTDOT for review.

b. Interagency Consultation

The conformity rule requires that Federal, State, and local transportation and air quality agencies establish formal procedures to ensure interagency coordination on critical issues. Interagency consultation is a collaborative process between organizations on key elements of the transportation and air quality planning and provides a forum for effective state and local planning and decision making.

Key organizations included in the interagency consultation are FHWA, FTA, EPA, CTDOT, CTDEEP and the MPOs.

Some goals of interagency consultation are to:

- Ensure all agencies meet regularly and share information;
- Identify key issues early in the process;
- Enable well-coordinated schedules for TIP/MTP conformity determinations and SIP development;
 and
- Allow collaborative decision on methodologies, assumptions and conformity test selections.

A list of attendees and call-in participants of the Interagency Consultation Meeting is included in Appendix C along with a copy of the minutes from the meeting.

c. Public Consultation

The transportation conformity process must also include public consultation on the emissions analysis and conformity determination. This includes posting of relevant documentation and analysis on a "clearinghouse" webpage maintained through the interagency consultation process. All MPOs in the affected nonattainment or maintenance areas must provide thirty-day public comment periods and address any comments received. For this transportation conformity determination, all Connecticut MPOs will hold a thirty-day public comment period.

If any public comments were received, they will be attached and can be found in Appendix E.

d. Scenario Years

The "Action Scenario" is the future transportation system that will result from full implementation of the TIPs and MTP.

VOC/NOx emission analysis was conducted for ozone season summer day conditions for the following years:

- 2018 (Attainment year and near term analysis year)
- 2025 (Interim modeling year)
- 2035 (Interim modeling year)
- 2045 (Metropolitan Transportation Plan horizon year)

PM2.5 emission analysis was conducted for the same years but for annual average conditions.

e. Other Planning Documents

The enaction of Section 81 of Connecticut Public Act 13-277 repealed Section 13b-15 of the Connecticut General Statutes, no longer mandating a biennial Master Transportation Plan effective July 1, 2013. The Department's Capital Plan has been expanded to include much of the project information that was formerly included in the Master Transportation Plan. In addition, the Existing Systems document, the Statewide Long Range Transportation Plan and "Let's GO CT!" contain other information that was included in various Master Transportation Plans.

5. Latest Planning Assumptions and Emissions Model

a. VMT

Vehicle miles of travel (VMT) estimates were developed from CTDOT's statewide network-based travel demand model, Series 31G. The 2018 travel model network, to the extent practical, represents all state highways and major connecting non-state streets and roads, as well as the rail, local bus, and expresses bus systems that currently exist. Future highway networks for 2020, 2025, 2028, 2030, 2035 and 2045 and transit networks for 2020, 2025, 2030, and 2045 were built by adding Statewide Transportation Improvement Program (STIP), TIP and MTP projects (programmed for opening after 2018) to the 2018 network year. These networks were used to run travel demand models and conduct emissions analyses for the years 2018, 2025, 2035, and 2045. Projects for each model analysis year for which network changes were required are listed in Appendix B.

It should be noted that TIP and MTP projects which have negligible impact on trip distribution and/or highway capacity have not been incorporated into the network. These include, but are not limited to, geometric improvements of existing interchanges, short sections of climbing lanes, intersection improvements, transit projects dealing with equipment for existing facilities and vehicles, and transit operating assistance. Other projects that reduce the number of vehicle trips, VMT or both may not be included. Such projects include ridesharing and telecommuting programs, bicycling facilities, clean fuel vehicle programs or other possible actions. These types of considerations, while not explicitly accounted for in the travel demand model, will continue to reduce the emissions levels in the regions. Essentially, those projects that do not impact the travel demand forecasts are not included in the networks and/or analysis.

The network-based travel model used for this analysis is the model that CTDOT utilizes for transportation planning, programming and design requirements. This travel demand model uses demographic and land use assumptions based on the 2011-2015 American Community Survey 5-Year Estimates population and Connecticut Department of Labor 2015 employment estimates. Population and employment projections for the years 2020, 2030, 2040 and 2050 were developed by the Connecticut Department of Transportation, Travel Demand and Air Quality Modeling Unit.

The model uses a constrained equilibrium approach to allocate trips among links. The model was calibrated using 2015 ground counts and 2015 Highway Performance Monitoring System (HPMS) Vehicle Miles of Travel data.

In addition, the Employer Commute Options (ECO) Program has been made available to all employers and is incorporated in the travel demand model. It is felt that this process is an effective means of achieving Connecticut's clean air targets. Funding of this effort under the Congestion Mitigation and Air Quality Improvement (CMAQ) program is included in the TIP for FY 2018-2021. It is estimated that this program, if fully successful, could reduce VMT and mobile source emissions by 2% in Southwest Connecticut.

Peak hour directional traffic volumes were estimated as a percentage of the Average Daily Traffic (ADT) on a link-by-link basis. Based on automatic traffic recorder data, 9.0 percent, 8.5 percent, 8.0 percent and 7.5 percent of the ADT occurs during the four highest hours of the day. A 55:45 directional split was assumed. Hourly volumes were then converted to Service Flow Levels (SFL) and Volume to Capacity (V/C) ratios calculated as follows:

SFL = DHV / PHF * N VC = SFL / C

where: DHV = Directional Hourly Volume
PHF = Peak Hour Factor = 0.9
N = Number of lanes
C = Capacity of lane

Peak period speeds were estimated from the 2000 Highway Capacity Manual based on the design speed, facility class, area type and calculated V/C ratio. On the expressway system, Connecticut- based free flow speed data was available. This data was deemed more appropriate and superseded the capacity manual speed values. The expressway free flow speeds were updated in 2005.

For the off-peak hours, traffic volume is not the controlling factor for vehicle speed. Off-peak link speeds were based on the Highway Capacity Manual free flow speeds as a function of facility class and area type. As before, Connecticut-based speed data was substituted for expressway travel, where available, and was also updated in 2005.

ShoreLine East, Hartford Rail Line, New Haven Rail Line, and its branch line schedules were updated in 2018 to reflect new headways and routes. Rail station boardings were then calibrated to 2015 actual counts in 2018 for both A.M. peak period and Midday off-peak service along all Connecticut rail lines.

Two special cases exist in the travel demand modeling process. These are centroid connectors and intrazonal trips:

- Centroid connectors represent the local roads used to gain access to the model network from centers of activity in each traffic analysis zone (TAZ). A speed of 25 mph is utilized for these links; and
- Intrazonal trips are trips that are too short to get on to the model network. VMT for intrazonal trips
 is calculated based on the size of each individual TAZ. A speed of 20 to 24 mph is utilized for peak
 period and 25 to 29 mph for off-peak.

The Daily Vehicle Miles of Travel (DVMT) is calculated using a methodology based on disaggregate speed and summarized by inventory area, functional classification, and speed. The annual VMT and speed profiles developed by this process are then combined with the emission factors from the MOVES2014b model to produce emission estimates for each scenario and time frame.

b. Emissions Model

For this transportation conformity analysis, the MOVES model, specifically MOVES2014b, was used to estimate on-road vehicle emissions for the action scenarios. MOVES is a state-of-the-science emission modeling system, developed by EPA, that estimates emissions for mobile sources at the national, county, and project level for criteria air pollutants, greenhouse gases, and air toxics.

MOVES estimates exhaust and evaporative emissions as well as brake and tire wear emissions from all types of on-road vehicles. It also uses a vehicle classification system based on the way vehicles are classified in the FHWA's Highway Performance Monitoring System (HPMS). Other parameters include VMT by vehicle and road type, vehicle hours traveled (VHT) by vehicle and road type, the number of each type of vehicle in the fleet, vehicle age distribution, model year, travel speed, roadway type, fuel information, meteorological data, such as ambient temperature and humidity, and applicable control measures such as reformulated gasoline (RFG) and inspection and maintenance (I/M) programs. Local inputs were cooperatively developed by CTDEEP and CTDOT, where applicable, using EPA recommended methods.²

The HPMS Vehicle Mix file was updated to reflect the average vehicle mix for the 2015-2017 timeframe. A Three year average was determined to be a more accurate representation of actual vehicle mix than the previous one year counts as the CTDOT rotates traffic and vehicle counts on a three year basis.

CTDEEP supplemented the 2011 DMV vehicle registration data with 2018 DMV vehicle registration data for motorcycle (source type 11) and school buses (source type 43).

In November 2012, EPA confirmed by telephone to CTDEEP that future conformity determinations utilizing newer versions of MOVES can be made by comparing emission results to the existing budgets based on older versions of MOVES. As new MVEBs are determined by EPA to be adequate for each area, they will be used to make conformity determinations.

For the ozone analysis, MOVES was only run to obtain VOC and NOx emissions on a typical summer weekday to compare to the ton per summer day ozone MVEBs. For the PM2.5 analyses, an annual emissions run was conducted for PM2.5 and NOx to compare to the ton per year PM2.5 MVEBs. All runs also included the National Low Emission Vehicle (NLEV) program in 2008 and all future years.

6. Conformity Tests and Air Quality Emissions Results

For the NY-NJ-CT ozone nonattainment area, VOC and NOx transportation emissions from the Action Scenarios must be less than the 2017 transportation emission budgets if analysis year is 2017 or later.

For the Greater Connecticut ozone nonattainment area, VOC and NOx transportation emissions from the Action Scenarios must be less than the 2017 transportation emission budgets if analysis year is 2017 or later.

For the NY-NJ-CT PM2.5 maintenance area, PM2.5 and NOx transportation emissions from the Action Scenarios must be less than the 2017 transportation emission budgets if analysis year is between 2017 and 2024.

For the NY-NJ-CT PM2.5 maintenance area, PM2.5 and NOx transportation emissions from the Action Scenarios must be less than the 2025 transportation emission budgets if analysis year is 2025 or later.

No tests for CO are required because the CO areas have been approved by EPA for Limited Maintenance Plan status.

² "MOVES2014, MOVES2014a, and MOVES2014b Technical Guidance: Using MOVES to Prepare Emission Inventories for State Implementation Plans and Transportation Conformity", EPA-420-B-18-039, August 2018.

The following tables show the MOVES2014b modeled emissions for both ozone and PM2.5 areas compared to the applicable MVEBs for each pollutant. In all cases the transportation program and plan meets the required conformity tests.

Table 5: Ozone Conformity - NOx and VOC Emissions Budget Test Results

| | | Tons per day | | | | | | |
|------|-----------------------------|--------------|-------|---------|------|------------|--------|--|
| Year | Ozone Area | Series 31G | | Budgets | | Difference | | |
| | | VOC | NOx | voc | NOx | VOC | NOx | |
| 2018 | CT Portion of NY-NJ-CT Area | 16.61 | 23.74 | 17.6 | 24.6 | - 0.99 | - 0.86 | |
| 2016 | Greater CT Area | 14.96 | 21.18 | 15.9 | 22.2 | - 0.94 | - 1.02 | |
| 2025 | CT Portion of NY-NJ-CT Area | 12.39 | 13.94 | 17.6 | 24.6 | - 5.21 | -10.66 | |
| 2025 | Greater CT Area | 11.18 | 12.53 | 15.9 | 22.2 | - 4.72 | - 9.67 | |
| 2035 | CT Portion of NY-NJ-CT Area | 7.27 | 8.45 | 17.6 | 24.6 | -10.33 | -16.15 | |
| 2035 | Greater CT Area | 6.49 | 7.53 | 15.9 | 22.2 | - 9.41 | -14.67 | |
| 2045 | CT Portion of NY-NJ-CT Area | 6.41 | 7.85 | 17.6 | 24.6 | -11.19 | -16.75 | |
| 2045 | Greater CT Area | 5.76 | 7.01 | 15.9 | 22.2 | -10.14 | -15.19 | |

Table 6: PM2.5 Conformity - Direct PM2.5 and NOx Emission Budget Test Results

| | | Tons per year | | | | | | | |
|------|-----------------------------|-------------------|---------|-------------------|----------|-------------------|----------|--|--|
| Year | PM2.5 Area | Series 31G | | Budgets | | Difference | | | |
| Teal | r WZ.5 Al Ca | Direct | NOx | Direct | NOx | Direct | NOx | | |
| | | PM _{2.5} | | PM _{2.5} | | PM _{2.5} | | | |
| 2018 | CT Portion of NY-NJ-CT Area | 318.1 | 7,837.5 | 575.8 | 12,791.8 | -257.7 | -4,954.3 | | |
| 2025 | CT Portion of NY-NJ-CT Area | 221.6 | 4,707.9 | 516.0 | 9,728.1 | -294.4 | -5,020.2 | | |
| 2035 | CT Portion of NY-NJ-CT Area | 169.2 | 2,987.4 | 516.0 | 9,728.1 | -346.8 | -6,740.7 | | |
| 2045 | CT Portion of NY-NJ-CT Area | 152.4 | 2,803.5 | 516.0 | 9,728.1 | -363.6 | -6,924.6 | | |

Emission Summary Tables are posted in Appendix D.

This analysis in no way reflects the full benefit in air quality from the transportation plan and program. The network-based modeling process is capable of assessing the impact of major new highway or transit service. It does not reflect the impact from the many projects, which are categorically excluded from the requirement of conformity. These projects include numerous improvements to intersections, which will allow traffic to flow more efficiently, thus reducing delay, fuel usage and emissions. Included in the TIP, but not reflected in this analysis, are many projects to maintain existing rail and bus systems. Without these projects, those systems could not offer the high level of service they do. With them, the mass transit systems function more efficiently, improve safety, and provide a more dependable and aesthetically appealing service. These advantages will retain existing patrons and attract additional riders to the system. The technology to quantify the air quality benefits from these programs is not currently available.

Changes in the transportation system will not produce significant emissions reductions because of the massive existing rail, bus, highway systems, and land development already in place. Change in these aspects is always at the margin, producing very small impacts.

As shown in this analysis, transportation emissions are declining dramatically and will continue to do so. This is primarily due to programs such as federal heavy-duty vehicle standards, reformulated fuels, enhanced inspection and maintenance programs, and Connecticut's low emissions vehicle (LEV) program.

7. Conclusions

CTDOT has assessed its compliance with the applicable conformity criteria requirements of the 1990 CAAA. Based upon this analysis, it is concluded that all elements of CTDOT's transportation program and the Metropolitan Transportation Plans conform to applicable SIP and 1990 CAAA Conformity Guidance criteria and the approved transportation conformity budgets.

8. Contact Information

Please direct any questions you may have on the air quality emission analysis to:

Connecticut Department of Transportation
Bureau of Policy and Planning
Division of Coordination, Modeling and Crash Data
Travel Demand / Air Quality Modeling Unit
2800 Berlin Turnpike
Newington, CT. 06111
(860) 594-2032

Email: Judy.Raymond@ct.gov

All MOVES modeling files and runstreams are available for review upon request on the Department's MOVES FTP site. The files will remain available during the 30-day public review period.

9. Appendices

In addition to the information required for a conformity determination, the following is attached:

Appendix A: Acronyms

Appendix B: List of Projects Included in Conformity Analysis by Network Year

Appendix C: Interagency Consultation Meeting

Appendix D: Emissions Summary Tables
Appendix E: Public Comments (if Any)

List of Projects Included in Conformity Analysis by Network Year

| MPO | Project # | Town | Route/Street Number | Project Description | Network Year |
|----------|-----------|---------------|------------------------|---|-----------------|
| CRCOG | | Various | CTFastrak | CTFastrak Stations & Fixed Guideway | 2015 |
| GBVMPO | 0036-0179 | Derby | Route 8 | Reconstruct interchanges 16 & 17; extend Pershing Drive & construct local roads | 2016 |
| CNV MPO | 0017-0182 | Bristol | Route 6 | Addition of a second through lane on Route 6 Eastbound from Carol Drive to Peggy Lane | 2018 |
| CNV MPO | 0051-xxxx | Waterbury | Various | TIGER Grant includes various roadway changes including reconstruction/extension of Jackson Street. Extension will meet at Freight Street and continue to West Main | 2018 |
| CRCOG | 0051-0259 | Farmington | I-84/Route 4/Route 6 | Interchange BSWY | 2018 |
| CRCOG | | Hartford | Hartford Line | Hartford Line - Existing Stations - Hartford | 2018 |
| GBVMPO | 0138-0211 | Stratford | Route 1 | Addition of a through lane on Rt 1 Southbound from Nobel Street to Soundview Avenue | 2018 |
| MULTIPLE | 0170-2296 | Berlin | Hartford Line | Hartford Line - Existing Stations - Berlin | 2018 |
| MULTIPLE | 0170-2296 | Various | Hartford Line | Hartford Line - Grade Crossing Elimination Program | 2018 |
| MULTIPLE | 0170-2296 | Meriden | Hartford Line | Hartford Line - Existing Stations - Meriden | 2018 |
| MULTIPLE | 0170-2296 | Wallingford | Hartford Line | Hartford Line - Existing Stations - Wallingford | 2018 |
| MULTIPLE | 0320-0015 | Various | Hartford Line | Hartford Line-Windsor Station (FDP 9/16/2020) | 2018 |
| MULTIPLE | 0320-0016 | Various | Hartford Line | Hartford Line-Windsor Locks (FDP 10/2/2019) | 2018 |
| MULTIPLE | Various | Various | Hartford Line | Hartford Line | 2018 |
| WESTCOG | 0102-0325 | Norwalk | Route 1 | Addition of a through lane on Rt. 1 Northbound from France Street to Rt. 53 | 2018 |
| WESTCOG | 0135-0301 | Stamford | Atlantic Street | Reconstruction of I-95 off ramps and Atlantic Street in vicinity of Metro North Railroad Bridge No. 08012R | 2018 |
| CNV MPO | 0151-0273 | Waterbury | I-84 | Upgrade Expressway - Phase 3 (80%) | 2020 |
| CNV MPO | 0124-xxx | Seymour | Route 113 | Between Interchange 22 and 23 to improve access | 2020 |
| CNV MPO | 0124-xxxx | Seymour | Route 8 | Realign interchange with new extension of Derby Road | 2020 |
| CNV MPO | 0126-xxxx | Shelton | Route 8 | Interchange 11 - Construct new SB entrance ramp, Widen Bridgeport Avenue | 2020 |
| CNV MPO | 0126-xxxx | Shelton | Route 714 | Between Huntington Avenue and Constitution Boulevard | 2020 |
| GBVMPO | 0015-0371 | Bridgeport | Seaview Ave | Seaview Avenue corridor: Operational improvements to corridor, and north of Rt 1 to provide access for proposed Lake Success Business Park and future local developments | 2020 |
| GBVMPO | 0015-xxxx | Bridgeport | Route 130 | Reconstruct and widen Rt 130 from Stratford Avenue bridge to Yellow Mill bridge | 2020 |
| GBVMPO | | Stratford | Main St/Route 113 | Main St Complete Street Implementation: Narrow Main St. from 4 lanes to 3, add buffered bike lanes, expand sidewalks and increase landscaped buffer | 2020 |
| WESTCOG | 0034-0347 | Danbury | SR 806 (Newtown Rd) | Improvements: Old Newtown to Plumtrees and Eagle to Industrial Plaza Rd | 2020 |
| WESTCOG | 0008-xxxx | Danbury | White Street | Operational Improvements on White Street at Locust Avenue and Eighth Avenue | 2020 |
| CNV MPO | 0080-0128 | Middlebury | I-84/Route 63/Route 64 | Improvements on Routes 63, 64 & I-84 WB Interchange 17: Build new connector road and realign existing state routes | 2025 |
| CNV MPO | | Beacon Falls | NRG | NRG Beacon Falls Phase II: Naugatuck River Greenway: Extend the road diet along South Main Street and install a multi-use trail | 2025 |
| CNV MPO | | Beacon Falls | NRG | NRG Beacon Falls Phase III: Naugatuck River Greenway: Extend the road diet along North Main Street and install a multi-use trail from about Depot Street to Church Street | 2025 |
| CNV MPO | | Prospect | Route 69 | Route 69 Traffic & Pedestrian Improvements: Optimize signal timing. Provide a lead or lag phase for the NB Route 69 approach left turners and prohibit the SB left turn onto Scott Road | 2025 |
| CNV MPO | | Thomaston | US Route 6 | Main St Safety Improvements: Narrowing lanes, eliminating one of the EB Main St lanes west of the ramps, and providing turn (deceleration) lanes into Pleasant St | 2025 |
| CNV MPO | | Waterbury | SR 801 | East Main St Spot Improvements & Lane configurations: Reconfigure to provide a uniform road width and number of lanes – one travel lane in each direction | 2025 |
| CNV MPO | | Waterbury | SR 801 | Safety improvments East Main Street: Remove 1 through lane in eastbound direction between Cherry Street and Brass Mill Dr. Shorten pedestrian crossing distances. | 2025 |
| CNV MPO | | Waterbury | CT Transit | Lakewood Road Bus: Add new 1 hour headway service along Lakewood Road. Stagger service with 422 to reduce headways to one half hour on trunk. | 2025 |
| CRCOG | 0042-0317 | East Hartford | Route 2 | Rt. 2 Operational & Safety Improvements Between Exits 3 and 5 | 2025 |
| CRCOG | 0055-0142 | Granby | 10/202 | Major Intersection Improvement at CT 20/189 | 2025 |
| CRCOG | 0063-0703 | Hartford | I-91/Route 15 | Relocation & Reconfigure Interchange 29 (CN) | 2025 |
| CRCOG | 0131-0190 | Southington | CT 10 | NHS - Remove Br 00518, reconstruct CT10/322 intersection | 2025 |

| MPO | Project # | Town | Route/Street Number | Project Description | Network Year |
|----------|-----------|--------------------|---------------------------------|---|-----------------|
| CRCOG | 0155-0171 | West Hartford | I-84 | I-84 West Hartford Exits 40 & 42 | 2025 |
| CRCOG | | Manchester | I-84 | Auxiliary lanes between Exits 62 and 63 | 2025 |
| CRCOG | | Manchester | I-84 | Auxiliary lanes between Exits 63 and 64/65 | 2025 |
| GBVMPO | 0015-0368 | Bridgeport | Route 700 | Lafayatte Circle realignment: Realign from a large, irregular one-way circulating configuration to several more typical roadway intersections connecting several city streets | 2025 |
| GBVMPO | 0036-0184 | Derby | Route 34 | Reconstruct and widen Main Street from Bridge St. to Ausonio Dr. to 4 travel lanes | 2025 |
| GBVMPO | 0138-0248 | Stratford | I-95 | Interchange 33: Reconstruct the partial interchange and replace it with a full-directional, diamond interchange. | 2025 |
| GBVMPO | | Fairfield | Route 58 at Black Rock Tpke. | Provide a 4-leg single-lane roundabout: Modify access with Moritz PI and Rt. 58 to be right-in/right-out access preceding roundabout. Remove access from Rt 58 to Whitewood Dr. | 2025 |
| GBVMPO | | Fairfield | Route 58 | Formalize left lane southbound as a dedicated left-turn lane | 2025 |
| GBVMPO | | Fairfield | Route 58 | Widen Black Rock Turnpike transition from 2 lanes to 4 in area of Samp Mortar to Tahmore Drive | 2025 |
| GBVMPO | | Monroe | Route 25 | Additional Southbound through lane; Widening on Purdy Hill Rd and Judd Rd for an exclusive left, exclusive through, and an exclusive right turn lanes. | 2025 |
| GBVMPO | | Seymour | New Road | Route 42 & Route 67 Connector: Construct new connector arterial (2 lanes) between Route 42 in Beacon Falls and Route 67 in Seymour. | 2025 |
| GBVMPO | | Seymour | WBL | Relocate the Seymour Rail Station to north of Route 67 as part of TOD redevelopment project | 2025 |
| GBVMPO | | Stratford | Main St/Route 113 | Main St Complete Street Implementation: Narrow Main St. from 4 lanes to 3 (Barnum Ave to Fenelon PI) Single lane in each direction w/a center turn lane. | 2025 |
| MULTIPLE | 0096-0204 | Newtown | I-84 | Exit 11 Intersection Improvements at Rt. 34/SR 490 | 2025 |
| RiverCOG | 0082-0316 | Middletown | Route 9/Route 17 | Rt. 9 / Rt. 17 Operational & Safety Improvements at Ramp (Reconfigure Rt 17 On-ramp to Rt 9 NB) | 2025 |
| RiverCOG | 0082-0318 | Middletown | Route 9 | Rt. 9 Removal of Lights in Middletown | 2025 |
| SCCOG | 0085-0146 | Montville/Salem | Route 85 | Corridor Improvements South of CT 82 | 2025 |
| SCCOG | 0120-0079 | Montville | Route 85 | Addition of a second through lane on Route 85 Northbound - north of Chesterfield Rd to south of Deer Run | 2025 |
| SCCOG | 0120-0094 | Salem | Route 85 | Corridor Improvements North of CT 82 | 2025 |
| SCCOG | | Colchester | Route 2 | Interchange improvements at Exit 17, add eastbound on-ramp, westbound off-ramp | 2025 |
| SCCOG | | Norwich/New London | CT Transit | New BRT-like service - Norwich and New London | 2025 |
| SCCOG | | Various | SEAT | 25% increase in service frequency, | 2025 |
| WESTCOG | 0102-0297 | Norwalk | East Ave | Reconstruction @ Metro North Br No. 42.14 | 2025 |
| SCCOG | | Norwich | Route 82 | Removal of a through lane on Rt 82 eastbound from west of Pine St to west of Fairmont St | 2028 |
| CNV MPO | | Naugatuck | Route 8 | Interchange 27 Improvements: Widening SB off-ramp on structure at Interchange 27 to provide right turn lane; Close NB off-ramp to North Main St; Close SB on-ramp from North Main St; | 2030 |
| CNV MPO | | Naugatuck | Route 8 | Interchange 28/29 Improvements: Close SB on-ramp from Exit 29 and SB off-ramp to North Main St; Install barrier to provide local access between Platts Mill Rd & North Main St; New SB on-ramp from local | 2030 |
| CRCOG | 0109-xxxx | Plainville | New Britain Ave | Add lane from New Britain Ave/Cooke Street to Hooker Street | 2030 |
| GBVMPO | 0036-xxxx | Derby | Route 8 | Route 8 Interchange 16 and 17; Construct new NB ramps. Close old ramps | 2030 |
| GBVMPO | 0126-xxxx | Shelton | Route 8 | Interchange 14 - Construct new SB entrance ramp | 2030 |
| GBVMPO | | Bridgeport | I-95 | Reconstruct and modify the southbound approach I-95 project to eliminate the weave section created by the entrance to Rt 8/25 from Washington Ave followed by the exit to Myrtle Ave. | 2030 |
| GBVMPO | | Bridgeport | Route 8/Route 25 | Construct a third lane for Rt 8 northbound from the split to the vicinity of off-ramp to Rt 15. | 2030 |
| GBVMPO | | Fairfield | Mill Plain Road | Addition of lane to southbound approach from I-95 ramps to US 1 | 2030 |
| GBVMPO | | Fairfield | Route 58 | Reduce Rt. 58 to one travel lane in each direction - Black Rock Tpke and Burroughs Dr | 2030 |
| GBVMPO | | Fairfield | Route 58 | Provide a 4-leg single-lane roundabout with a right-turn bypass lane for SB approach at Burroughs Dr & Katona Dr | 2030 |
| GBVMPO | | Fairfield | Route 58 | Narrow Rt 58 to one through lane in each direction. Shoprite to Stillson Rd | 2030 |
| GBVMPO | | Fairfield | Route 58 | Narrow Rt. 58 to one through lane in the southbound direction. Old Navy to Fairfield Woods Rd | 2030 |
| GBVMPO | | Shelton | SR 714 | Widening of Bridgeport Avenue to provide a consistent 4-lane cross section with turn lanes from Trumbull town line to Constitution Boulevard | 2030 |

Interagency Consultation Meeting

Interagency Consultation Meeting 2019-2045 Metropolitan Transportation Plan Connecticut Department of Transportation November 19, 2018 Room 2141 GoTo Meeting

Attendees:

Ken Shooshan-Stoller - FHWA

Erik Shortell - FHWA

Kurt Salmoiraghi - FHWA

Leah Sirmin - FTA

Ariel Garcia - EPA

Eric Rackauskas – EPA

Louis Corsino - CTDEEP

Tom Malone - CRCOG

Devon Lechtenberg - CRCOG

Rob Aloise - CRCOG

Christian Meyer – CNVMPO

Zachary Guarino – CNVMPO

Matt Fulda - CTMetro COG

Patrick Carlton - CTMetro COG

Mark Hoover - CTMetro COG

Robert Haramut - LCRVCOG

Kate Rattan – SECCOG

Kristen Hadjstylianos – Western COG

Jamie Bastian – Western COG

Robbin Cabelus - CTDOT

Maribeth Wojenski – CTDOT

Judy Raymond – CTDOT

Kasey Faraci – CTDOT

Edgar Wynkoop - CTDOT

Grayson Wright - CTDOT

Sara Radacsi – CTDOT

Matthew Cegielski – CTDOT

Steven Giannitti - CTDOT

Greg Pacelli – CTDOT

The Interagency Consultation Meeting was held to review projects submitted for the 2019-2045 MTP.

The Conformity Documents will be electronically distributed to the MPOs, FHWA, FTA, EPA and CTDEEP. The MPOs will need to hold a 30-day public review and comment period. At the end of this review period, the MPO will hold a Policy Board meeting to endorse the Air Quality Conformity determination.

There was also a brief discussion on the travel demand model and emissions software planning assumptions employed in the conformity analysis. CTDEEP is updating the Vehicle Registration Data and should have it available for use by the end of November 2018.

The schedule for the 2019-2045 Metropolitan Transportation Plan Conformity Determination Analysis is as follows:

- MPOs transmit signed and dated Concurrent Form to judy.raymond@ct.gov by November 20, 2018
- CTDOT Travel Demand Model Unit performs the air quality analysis and sends the Air Quality Conformity Determination Report electronically to all MPOs in early February 2019
- MPOs advertise and hold a 30-day public review and comment period for the Air Quality Conformity
- MPOs hold a Policy Board meeting approving and endorsing the Air Quality Conformity and transmit resolutions to <u>judy.raymond@ct.gov</u> after Policy Board meeting.

It is important that all MPOs follow this schedule to ensure that the MTP Conformity Determinations can go forward on schedule.

PLANNING ASSUMPTIONS

Ozone and PM_{2.5} 2019-2045 Metropolitan Transportation Plan November 19, 2018

| Planning Assumptions | Frequency of Review* | Responsible Agency | Year of Data |
|--|---|--------------------|---|
| for Review | | | |
| Socioeconomic Data | At least every 5 years | СТДОТ | 2015 ACS Data 2015 DOL |
| DMV Vehicle Registration Data | At least every 5 years | CTDEEP | 2018** |
| State Vehicle Inspection and Maintenance Program | Each conformity round | CTDEEP | Same as currently approved I&M SIP |
| State Low Emission Vehicle Program | Each conformity round following approval into the SIP | CTDEEP | Same as SIP |
| VMT Mix Data | At least every 5 years | CTDEEP | 2018*** |
| Analysis Years – PM _{2.5} | Each conformity round | CTDOT/CTDEEP | 2018, 2025, 2035, 2045 |
| Analysis Years – Ozone | Each conformity round | CTDOT/CTDEEP | 2018, 2025, 2035, 2045 |
| Emission Budget – PM _{2.5} | As SIP revised/updated | CTDEEP | 2018: PM2.5 575.8 NOx 12,791.8 2025: PM2.5 516.0 NOx 9,728.1 |
| Emission Budget – Ozone | As SIP revised/updated | CTDEEP | NY Area: VOC 17.6 NOx 24.6 Gr. CT: VOC 15.9 NOx 22.2 |
| Temperatures and Humidity | As SIP revised/updated | CTDEEP | X |
| Control Strategies | Each conformity round | CTDEEP | X |
| HPMS VMT | Each conformity round | CTDOT | 2015 |

^{*} Review of Planning Assumptions does not necessarily prelude an update or calibration of the travel demand model.

^{**} Data updated in 2018 based on 2011 DMV registration data and 2018 motorcycle and school bus registration data

^{***} Data available 2018 based on an average of 2015-2017

Appendix D
